

Human Error – A Major Cause Behind Successful Phishing Attacks

Secure your weakest link with different types of phishing simulations.

“Human error caused 90% of cyber data breaches.”

- The UK Information Commissioner's Office (ICO)

Solve Your Problem with Real-Life Phishing Simulations

Email Phishing

Employees are highly susceptible to fall prey to phishing tactics as they can't identify an email scam.

SMiShing

Using text messages to trick users into divulging confidential information.

Vishing

Voice phishing is the telephone equivalent of phishing.

USB Baiting

A phishing form where the attacker uses malware-infected devices like a USB flash drive to infect a computer.

One Solution – Aware!

Help your employees build subconscious competency to fight phishing attacks.

How "Aware" is Different?

Training Videos

The Aware Application let's your team learn on the go. For security awareness, training plays a crucial role.

Challenge

Aware enables users to participate in live quiz sessions with their friends and colleagues.

Game Time

With the Aware Application, quizzes can turn into company wide competitions.

Leader Board

The Leader Board shows which teams or individuals are leading the competition.

Phishing Simulations

Aware comes with a wide variety of Phishing Simulations as well to test employee's susceptibility to social engineering attacks.

CheckAPhish

CheckAPhish helps you gain visibility into your organization's risk behavior and measure the overall risk levels across your user groups.
